A volatilidade é muitas vezes o fator persistente nos mercados da América Latina. Embora o ano de 2020 não tenha sido uma exceção, os mercados globais também foram atingidos pela volatilidade da COVID-19. A pandemia global exacerbou a incerteza em todo o mundo e todos os mercados de capitais foram prejudicados, particularmente durante o primeiro trimestre de 2020.

O S&P Latin America BMI teve a maior perda (-46,0%) entre os nossos principais índices regionais no primeiro trimestre, seguido pelo S&P MILA Pacific Alliance Composite (-37,5%), que representa a América Latina excluindo o Brasil. As ações da América Latina subiram no segundo trimestre, mais ou menos em linha com a recuperação global, mas depois caíram no terceiro trimestre. Impulsionado pelo otimismo econômico global após os anúncios de desenvolvimento de vacinas, o S&P Latin America BMI encabeçou o ranking no quarto trimestre, se valorizando mais de 30%. Contudo, isso não foi suficiente para recuperar as perdas do início do ano, uma vez que o índice encerrou 2020 com uma queda de 12,9%.

Tendências semelhantes foram observadas em todos os setores e países ao longo do ano. No primeiro trimestre, todos os setores e países caíram, sendo Energia e o Brasil os que apresentaram os piores resultados. Durante os trimestres seguintes, os países e setores tiveram uma forte recuperação, embora algumas performances tenham sido melhores do que outras, um sinal de que a pandemia afetou alguns países e setores mais do que outros. Ainda que o quarto trimestre tenha apresentado resultados impressionantes e Energia tenha gerado os melhores retornos (51,2%), Tecnologia da Informação (49,2% YTD) e Materiais (28,3% YTD) foram os setores que mais consistentemente contribuíram para um desempenho positivo ao longo do ano. As empresas de materiais, que incluem exportadores de cobre e ferro, registaram preços recorde para as suas exportações, desde janeiro de 2013 para o cobre e outubro de 2011 para o ferro.¹

Entre os países da América Latina, todos os índices emblemáticos terminaram o ano no vermelho quando medidos em dólares americanos. As melhores performances vieram do S&P/BVL Peru Select 20% Capped, que caiu 0,4%, e o S&P/BMV IRT do México, que recuou 1,8%.

A história foi diferente para os retornos em moedas locais, dada a depreciação significativa da maioria das moedas em relação ao dólar americano em 2020. O S&P Brazil BMI calculado em reais (6,43%), o S&P Merval da Argentina em pesos argentinos (22,9%) e o S&P/BVL Peru Select 20% Capped em novos sóis peruanos (8,8%) foram os líderes quanto aos retornos em moeda local durante o ano.

Com a pandemia ainda a grassar em muitas partes do mundo, o que devemos esperar em 2021? A boa notícia é que há duas vacinas com alta eficácia sendo distribuídas em vários países. Até agora na região, apenas cidadãos do Brasil, Chile e México começaram a ser vacinados, enquanto que os restantes países da América Latina estão numa longa lista de espera. Os economistas da região² observam a lenta e frágil recuperação. É verão no hemisfério sul, o que está ajudando a conter o número de casos e, com sorte, no outono e inverno de 2021 a vacina terá ajudado a controlar a propagação do vírus. A chave agora é quão rápida e eficaz será a distribuição das vacinas na América Latina e no resto do mundo antes que a economia global volte para uma tendência de crescimento forte. Mais uma vez, este ano será muito interessante.

The S&P/BMV Total Mexico Index and the S&P/BMV Total Mexico ESG Index were launched on June 22, 2020. The S&P/BVL Peru Select 20% Capped Index was launched on March 30, 2020. S&P/BVL Enhanced Dividend Index was launched February 10, 2020. The S&P/BYMA Argentina General Sector Indices were launched on August 5, 2019. The S&P/B3 Low Volatility High Dividend was launched August 7, 2019. The S&P/B3 High Beta Index was launched January 21, 2019. The S&P/BOVESPA Non-State Owned Enterprises was launched June 1, 2017. The S&P/CLX MidSmallCap Index was launched February 4, 2019. The S&P/CLX Sector Indices were launched August 3, 2018. The S&P/CLX Domestic Focus sector indices were launched May 13, 2019. The S&P/BMV Mexico Target Risk Index Series was launched November 1, 2016. The S&P/BMV IPC Equal Weight Index was launched on January 28, 2019. The S&P/BMV Quality, Value, and Growth Index was launched on August 2, 2017. The S&P/BMV Market Makers Index was launched on February 26, 2018. The S&P/BMV Single Factor Index Series was launched on March 27, 2019. The S&P/BMV Ingenius Index was launched on November 25, 2019. The Dow Jones Sustainability Chile was launched September 28, 2015. The S&P MILA Pacific Alliance Midcap, Smallcap and Midsmallcap Indices were launched October 3, 2016. The Dow Jones Sustainability MILA Pacific Alliance was launched on October 18, 2017. All information presented prior to an index's Launch Date is hypothetical (back-tested), not actual performance. The back-test calculations are based on the same methodology that was in effect on the index Launch Date. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. Complete index methodology details are available at www.spglobal.com/spdji. Past performance of the Index is not an indication of future results. Prospective application of the methodology used to construct the Index may not result in performance commensurate with the back-test returns shown.

S&P Dow Jones Indices defines various dates to assist our clients in providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the index is set to a fixed value for calculation purposes. The Launch Date designates the date when the values of an index are first considered live: index values provided for any date or time period prior to the index's Launch Date are considered back-tested. S&P Dow Jones Indices defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company's public website or its data feed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed "Date of introduction") is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index's public release date.

Please refer to the methodology for the Index for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Information presented prior to an index's launch date is hypothetical back-tested performance, not actual performance, and is based on the index methodology in effect on the launch date applied retroactively. However, when creating back-tested history for periods of market anomalies or other periods that do not reflect the general current market environment, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market the index is designed to measure or strategy the index is designed to capture. For example, market capitalization and liquidity thresholds may be reduced. Back-tested performance reflects application of an index methodology and selection of index constituents with the benefit of hindsight and knowledge of factors that may have positively affected its performance, cannot account for all financial risk that may affect results and may be considered to reflect survivor/look ahead bias. Actual returns may differ significantly from, and be lower than, back-tested returns. Past performance is not an indication or guarantee of future results.

Typically, when S&P DJI creates back-tested index data, S&P DJI uses actual historical constituent-level data (e.g., historical price, market capitalization, and corporate action data) in its calculations. As ESG investing is still in early stages of development, certain datapoints used to calculate S&P DJI's ESG indices may not be available for the entire desired period of back-tested history. The same data availability issue could be true for other indices as well. In cases when actual data is not available for all relevant historical periods, S&P DJI may employ a process of using "Backward Data Assumption" (or pulling back) of ESG data for the calculation of back-tested historical performance. "Backward Data Assumption" is a process that applies the earliest actual live data point available for an index constituent company to all prior history of index performance. For example, Backward Data Assumption inherently assumes that companies currently not involved in a specific business activity (also known as "product involvement") were never involved historically and similarly also assumes that companies currently involved in a specific business activity were involved historically too. The Backward Data Assumption allows the hypothetical back-test to be extended over more historical years than would be feasible using only actual data. For more information on "Backward Data Assumption", please see <https://www.spglobal.com/spdji/en/documents/education/faq-spdji-esg-back-testing-backward-data-assumption-overview.pdf>. The methodology and factsheets of any index that employs backward assumption in the back-tested history will explicitly state so. The methodology will include an Appendix with a table setting forth the specific data points and relevant time period for which backward projected data was used.

Index returns shown do not represent the results of actual trading of investable assets/securities. S&P Dow Jones Indices maintains the index and calculates the index levels and performance shown or discussed but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three-year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).
